DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wagner (US 6,684,269).

Claims:

1. A method of facilitating purchases from a wireless device comprising:
detecting, at a proxy, that a wireless device is attempting to access a form from a merchant server, where the form requires information to be entered;/abstract; fig 16B; col 8, L 8-33; col 5, L 14-16; col 6, L35-39; col 7, L 39-43
automatically filling the form at the proxy;/ col 6, L 13-39; fig 6AB, 15A; col 19, L 31-44; col 11, L 8-32

delivering the filled-form to the wireless device together with a hyperlink to a file/col 19, L 9-41

Wagner does not explicitly disclose stored on a wallet server. Official notice is taken that this feature is old and well known in the e-commerce art and / or retail art. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to

implement this feature for the advantage of efficient storage and portable access of transaction information. upon receipt at said wallet server of an instruction from the wireless device, delivering to the merchant server information to complete a transaction./col 19, L 9-41

2. The method of claim 1, wherein the step of detecting comprises receiving a request from the wireless device, parsing the request and comparing it with a pre-determined list of merchant form identifiers./ fig 14-16
3. The method of claim 2, wherein the pre-determined list includes associated mappings between fields of merchant forms and fields of user personal details./ col 6, L 35-39; col 19, L 9-41
4. The method of claim 2, wherein the step of receiving comprises receiving a wireless protocol request at a wireless gateway and converting it to a HTTP request./col 6, L 35-39, col 19, L 9-41
5. The method of claim 1, wherein, following the step of detecting, retrieving the form from the merchant server and caching it in a cache at the wallet proxy./ col 5, L 13-20; col 19, L 9-41; col 7, L 39-66
6. The method of claim 5 further comprising retrieving the form from the cache upon receipt of an invoke instruction to invoke the wallet proxy./col 19, L 9-41

7. The method of claim 6, wherein the step of filling the form proceeds from the step of retrieving the form from the cache./col 6,L 35-39; co 19, L 9-41

8. A proxy for facilitating purchases from a wireless device comprising:
a memory to store a list of predetermined merchant form URL'S,
a parser and filter for identifying by comparison with said list an incoming attempt from a wireless device to access a form from a merchant server, where the form requires information to be entered,
a form-filling software program for filling the form at the proxy; and
a socket to a wireless gateway for delivering the filled-in form to the wireless device together with a hyperlink to a file stored on a wallet server and for receiving an instruction from the wireless device; and
a socket to a wallet server for delivering the instruction to the wallet server to complete a transaction./ refer to claim 1

9. A data storage medium having stored thereon wallet proxy computer instructions that, when loaded onto a gateway server, cause the gateway server to operate as a proxy that:

receives, parses and filters requests from wireless devices,
identifies an attempt to access a form from a merchant server, where the form requires information to be entered,

automatically fills the form with user data; and
delivers the filled-form to a wireless device through the gateway, together with a
hyperlink to a file stored on a wallet server./refer to claim 1

10. A method of operation of a wireless device by a user, the method comprising:
sending, to an Internet connected gateway, a request to access a form from a
merchant server, where the form requires information to be entered;
receiving from the gateway a representation of the form pre-filled by wallet
software associated with the gateway with data relating to the user, together with a
hyperlink to a file stored on a wallet server further associated with the wallet software;
selectively activating the hyperlink to the file to activate a transaction with the
merchant server./ refer to claim 1

11. A wireless device having a browser for sending, to an internet connected gateway,
a request to access a form from a merchant server, where the form requires information
to be entered, characterized in that, upon receipt from a proxy, the wireless device
receives,
stores and presents to a user a representation of the form pre-filled with data relating to
the user, together with a hyperlink to a file and an indication that activation of the
hyperlink will complete a transaction./ refer to claim 1
